

Welcome to the Lower Fraser Basin!

The Lower Fraser Basin Eco-Research Project is an interdisciplinary research project at the University of British Columbia, Vancouver, Canada. The project brings together social and natural scientists as well as communities, business and government to evaluate the prospects for sustainability in the region. As one of the fastest growing areas of North America, the Lower Fraser Basin provides a good example of the choices that must be made to accommodate population growth while maintaining the health of the ecosystems on which a region depends.
